

Website Plan, Copy, Booking Form and Backend

A complete plan for building the HavenStay Hotels booking website in Google AI Studio with a Google Sheets and Apps Script backend

Your Comfort, Our Priority.

1. Website strategy

Goal: a visitor goes from landing to a submitted reservation in four clicks or fewer.

Booking flow

1. Visitor sees the search bar (check-in, check-out, adults, children) on the homepage.
2. They land on **Rooms**, which shows room cards filtered by their dates.
3. They open a **Room Details** page and click **Reserve Now**.
4. The **Booking Form** opens with the room and dates pre-filled. The guest fills in their details.
5. On submit, the data goes to Google Sheets through Apps Script, which checks for overlapping dates first.
6. The guest sees a **Confirmation page** with a booking reference, and the hotel gets an email alert.

> **Decision to make: payment.** The brief asks for Paystack, but a Sheets backend cannot safely verify payments the way a real server does.
>
> **Phase 1 (recommended now):** the guest submits a reservation request, status is *Pending*, and the hotel confirms and sends a payment link or collects at check-in.
> **Phase 2:** add Paystack, with Apps Script verifying the transaction through Paystack's API before marking the booking *Confirmed*. A redirect alone is never proof of payment.
>
> Google Sheets has no real authentication, so the admin side should be the Sheet itself, with access limited to the hotel's Google account.

2. Pages and what each contains

#	Page	Contents
1	Home	Nav with logo; full-width hero; search bar; featured rooms; amenities; Why Choose HavenStay; testimonials; offers; newsletter; footer
2	About Us	Brand story, mission, vision, what guests can expect
3	Rooms & Suites	Room cards with photo, price, amenities; filters for dates, price, room type
4	Room Details	Photo gallery, description, facilities, price per night, availability, Reserve Now button
5	Booking Form	Dates, guests, personal details, special requests, summary panel
6	Confirmation	Booking reference, summary, next steps
7	Contact Us	Contact form, phone, email, address, map
8	Login / Register (phase 2)	Account access
9	My Bookings (phase 2)	Upcoming and past stays

Admin is handled in Google Sheets for now.

3. Website copy

Navigation

Home | Rooms & Suites | About | Contact | **Book Your Stay** (gold button)

Hero

- Headline: **Experience Comfort Beyond Expectations.**

- Subtext: Discover exceptional stays, thoughtfully designed rooms and memorable hospitality experiences at HavenStay Hotels.
- Buttons: **Book Your Stay** (primary) and Explore Rooms (secondary)

Search bar

Find Your Perfect Stay. Fields: Check-in, Check-out, Adults, Children, **Check Availability**

Featured rooms

Heading: *Rooms Designed for Rest.* Sub: Compare room types, prices and amenities, then reserve in minutes. Card: [Room name], [Price] per night, [Guests], [3 amenities], View Details, Reserve Now.

Amenities

Heading: *Everything You Need for a Comfortable Stay.* Only list what the hotel actually offers. Placeholders to confirm: Wi-Fi, air conditioning, restaurant, swimming pool, 24-hour reception, parking.

Why Choose HavenStay

- **Easy room discovery:** browse and compare rooms in one place.
- **Clear pricing:** see what you'll pay before you book.
- **Live availability:** check your dates instantly.
- **Convenient reservations:** book online in a few simple steps.

Testimonials, offers and newsletter

- Testimonials: use placeholder text until you have real guest reviews. Do not publish invented reviews as real.
- Offers: *Special Offers.* Add only real offers.
- Newsletter: *Stay in the Loop.* "Get updates and offers from HavenStay Hotels." [Email] | Subscribe

About

- At HavenStay Hotels, we believe every stay should feel special. We are committed to making your accommodation experience comfortable, convenient and memorable.
- **Mission:** To make hotel reservations simple, convenient and accessible by connecting travellers with quality accommodation.
- **Vision:** To become a trusted accommodation booking platform known for convenience, transparency and an excellent customer experience.
- **Who we welcome:** tourists, business travellers, couples, families and students.

Contact, final call to action and confirmation

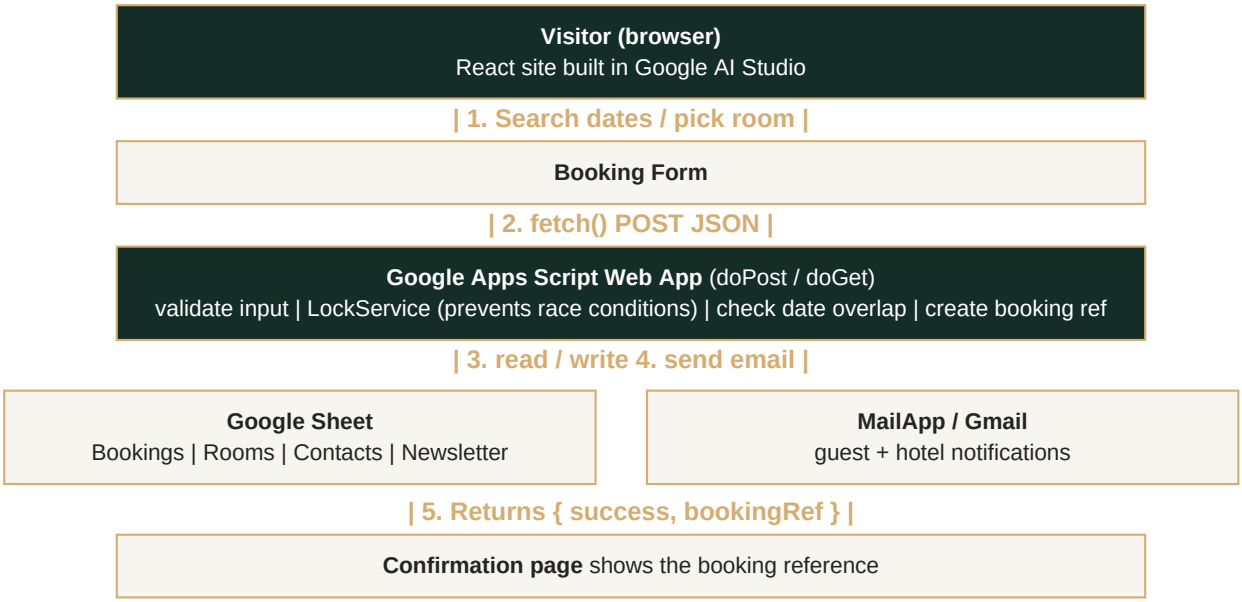

- Contact: *We're Here to Help.* Form: Name, Email, Phone, Message, Send Message.
- Final CTA band: **Book Your Stay Today.** Your Comfort, Our Priority.
- Confirmation page: *Thank you, [First name]. Your reservation request has been received.* Your booking reference is **[HS-XXXXXX]**. We'll contact you shortly to confirm.

4. Booking form

Field	Type	Notes
Room / apartment type	dropdown (pre-filled)	required
Check-in date	date	required, not in the past
Check-out date	date	required, after check-in
Adults	number	min 1
Children	number	min 0
Full name	text	required
Email	email	required
Phone	tel	required
Special requests	textarea	optional
Payment preference	dropdown	Pay at hotel / Send me a payment link
Consent checkbox	checkbox	agree to the booking policy

Auto-generated by the script: Booking Ref, Timestamp, Nights, Status (*Pending*).

5. Backend schematic

Phase 2: Apps Script talks to the Paystack API to verify the transaction before status changes to Confirmed.

Sheet tabs

Tab	Columns
Rooms	RoomID, Name, Type, PricePerNight, MaxGuests, Amenities, ImageURL, Active
Bookings	BookingRef, Timestamp, RoomID, RoomName, CheckIn, CheckOut, Nights, Adults, Children, FullName, Email, Phone, Requests, PaymentPref, TotalPrice, Status
Contacts	Timestamp, Name, Email, Phone, Message
Newsletter	Timestamp, Email

6. Apps Script

Create the Sheet with the four tabs above and the header rows in row 1. Go to **Extensions > Apps Script** and paste:

```
const SS = SpreadsheetApp.getActiveSpreadsheet();
const HOTEL_EMAIL = 'your-hotel-email@gmail.com'; // change this

function doGet(e) {
  const action = e.parameter.action;
  if (action === 'rooms') return json_(getRooms_());
  if (action === 'availability') {
    return json_(isAvailable_(e.parameter.roomId, e.parameter.checkIn, e.parameter.checkOut));
  }
  return json_({ ok: true });
}

function doPost(e) {
  const lock = LockService.getScriptLock();
  try {
    lock.waitLock(20000);
    const data = JSON.parse(e.postData.contents);
    if (data.type === 'contact') return json_(saveContact_(data));
    if (data.type === 'newsletter') return json_(saveNewsletter_(data));
    return json_(saveBooking_(data));
  } catch (err) {
    return json_({ success: false, message: 'Server busy or error. Please try again.' });
  } finally {
    lock.releaseLock();
  }
}

function saveBooking_(d) {
  const required = ['roomId','checkIn','checkOut','adults','fullName','email','phone'];
  for (const k of required) if (!d[k]) return { success:false, message:'Missing field: ' + k };

  const ci = new Date(d.checkIn), co = new Date(d.checkOut);
  const today = new Date(); today.setHours(0,0,0,0);
  if (isNaN(ci) || isNaN(co) || ci < today || co <= ci)
    return { success:false, message:'Please choose valid dates.' };
  if (!/^\S+@\S+\.\S+$/.test(d.email))
    return { success:false, message:'Invalid email address.' };

  const room = getRooms_().find(r => String(r.RoomID) === String(d.roomId));
  if (!room) return { success:false, message:'Room not found.' };
  if (Number(d.adults) + Number(d.children || 0) > Number(room.MaxGuests))
    return { success:false, message:'Too many guests for this room.' };

  // Server-side double-booking check
  if (!isAvailable_(d.roomId, d.checkIn, d.checkOut).available)
    return { success:false, message:'Sorry, this room is no longer available for those dates.' };

  const nights = Math.round((co - ci) / 86400000);
```

```
  const total = nights * Number(room.PricePerNight);
  const ref = 'HS-' + Utilities.getUuid().slice(0, 6).toUpperCase();

  SS.getSheetByName('Bookings').appendRow([
    ref, new Date(), room.RoomID, room.Name, d.checkIn, d.checkOut, nights,
    d.adults, d.children || 0, d.fullName, d.email, d.phone,
    d.requests || '', d.paymentPref || '', total, 'Pending'
  ]);

  MailApp.sendEmail(d.email, 'HavenStay Hotels - Reservation received (' + ref + ')',
    'Dear ' + d.fullName + ',\n\nThank you for choosing HavenStay Hotels.\n' +
    'Reference: ' + ref + '\nRoom: ' + room.Name + '\nCheck-in: ' + d.checkIn +
    '\nCheck-out: ' + d.checkOut + '\nNights: ' + nights + '\nTotal: ' + total +
    '\n\nWe will contact you shortly to confirm.\n\nYour Comfort, Our Priority.');
  MailApp.sendEmail(HOTEL_EMAIL, 'New booking request ' + ref,
    d.fullName + ' | ' + d.phone + ' | ' + room.Name + ' | ' + d.checkIn + ' to ' + d.checkOut);

  return { success:true, bookingRef:ref, nights:nights, total:total };
}

function isAvailable_(roomId, checkIn, checkOut) {
  const rows = SS.getSheetByName('Bookings').getDataRange().getValues();
  const ci = new Date(checkIn), co = new Date(checkOut);
  for (let i = 1; i < rows.length; i++) {
    const [ref,,rid,,bci,bco,,,,,,,,,, status] = rows[i];
    if (String(rid) !== String(roomId) || status === 'Cancelled') continue;
    if (ci < new Date(bco) && co > new Date(bci)) return { available:false };
  }
  return { available:true };
}

function getRooms_() {
  const v = SS.getSheetByName('Rooms').getDataRange().getValues();
  const h = v.shift();
  return v.map(r => Object.fromEntries(h.map((k,i) => [k, r[i]])))
          .filter(r => r.Active === true || r.Active === 'TRUE');
}

function saveContact_(d) {
  SS.getSheetByName('Contacts').appendRow([new Date(), d.name, d.email, d.phone, d.message]);
  return { success:true };
}
function saveNewsletter_(d) {
  SS.getSheetByName('Newsletter').appendRow([new Date(), d.email]);
  return { success:true };
}
function json_(o) {
  return ContentService.createTextOutput(JSON.stringify(o)).setMimeType(ContentService.MimeType.JSON);
```

```
}
```

Deploy

Deploy > New deployment > Web app > Execute as **Me** > Access **Anyone** > copy the URL.

Calling it from the site

Use `text/plain` to avoid CORS preflight problems:

```
const res = await fetch(APPS_SCRIPT_URL, {
  method: 'POST',
  headers: { 'Content-Type': 'text/plain;charset=utf-8' },
  body: JSON.stringify(formData)
});
const result = await res.json();
```

7. Prompt to paste into Google AI Studio

> Build a responsive React + Tailwind website for **HavenStay Hotels** (tagline: *Your Comfort, Our Priority.*). Use the uploaded logo. Colours: Deep Forest Green #142D26 (primary), Warm Gold #D5AD72 (accents), Warm Ivory #F7F5F0 (backgrounds), Charcoal #242424 (text), White #FFFFFF. Fonts: Playfair Display for headings, Inter for body. Primary buttons are forest green with white text; secondary buttons have a gold or green border. Style: modern luxury, minimal, spacious, subtle transitions, no clutter.
>
> Pages: Home, About, Rooms & Suites, Room Details, Booking Form, Confirmation, Contact. Use the copy I provide. Rooms load from APPS_SCRIPT_URL?action=rooms. Room availability checks use ?action=availability&roomId=&checkIn=&checkOut=. The booking form POSTs JSON to APPS_SCRIPT_URL with Content-Type text/plain and shows the returned bookingRef on the Confirmation page. Show loading states and clear error messages (including "room no longer available"). Validate dates (check-out after check-in, not in the past). Keep the Apps Script URL in one config constant. No fake buttons: every button must work. Do not invent amenities, prices or reviews; use clearly marked placeholders.

Send this first, then add pages one at a time with follow-up prompts.

8. Roadmap

1. Create the Sheet and Apps Script, deploy, and test with a sample booking.
2. Generate the front end in AI Studio (Home, Rooms, Room Details).
3. Connect the booking form and confirmation page.
4. Add Contact, Newsletter and About.
5. Test the double-booking case: submit overlapping dates twice.
6. Add Paystack and customer accounts later, ideally with a real backend (Node and Prisma) as in the original brief.
